So, about that Signal chat.

On Monday, shortly after we published a story about a massive Trump-administration security breach, a reporter asked the secretary of defense, [Pete Hegseth](#), why he had shared plans about a forthcoming attack on Yemen on the Signal messaging app. He answered, "Nobody was texting war plans. And that's all I have to say about that."

At a Senate hearing yesterday, the director of national intelligence, [Tulsi Gabbard](#), and the director of the Central Intelligence Agency, John Ratcliffe, were both asked about the Signal chat, to which Jeffrey Goldberg, the editor in chief of *The Atlantic*, was inadvertently invited by National Security Adviser Michael Waltz. "There was no classified material that was shared in that Signal group," Gabbard told members of the Senate Intelligence Committee.

Ratcliffe said much the same: “My communications, to be clear, in the Signal message group were entirely permissible and lawful and did not include classified information.”

President Donald Trump, asked yesterday afternoon about the same matter, said, “It wasn’t classified information.”

These statements presented us with a dilemma. In *The Atlantic*’s initial story about the Signal chat—the “Houthi PC small group,” as it was named by Waltz—we withheld specific information related to weapons and to the timing of attacks that we found in certain texts. As a general rule, we do not publish information about military operations if that information could possibly jeopardize the lives of U.S. personnel. That is why we chose to characterize the nature of the information being shared, not specific details about the attacks.

Read: The Trump administration accidentally texted me its war plans

The statements by Hegseth, Gabbard, Ratcliffe, and Trump—combined with the assertions made by numerous administration officials that we are lying about the content of the Signal texts—have led us to believe that people should see the texts in order to reach their own conclusions. There is a clear public interest in disclosing the sort of information that Trump advisers included in nonsecure communications channels, especially because senior administration figures are attempting to downplay the significance of the messages that were shared.

Experts have repeatedly told us that use of a Signal chat for such sensitive discussions poses a threat to national security. As a case in point, Goldberg received information on the attacks two hours before the scheduled start of the bombing of Houthi positions. If this information—particularly the exact times American aircraft were taking off for Yemen—had fallen into the wrong hands in that crucial two-hour period, American pilots and other American personnel could have been exposed to even greater danger than they ordinarily would face. The Trump administration is arguing that the military information contained in these texts was not classified—as it typically would be—although the president has not explained how he reached this conclusion.

Yesterday, we asked officials across the Trump administration if they objected to us publishing the full texts. In emails to the Central Intelligence Agency, the Office of the Director of National Intelligence, the National Security Council, the Department of Defense, and the White House, we wrote, in part: “In light of statements today from multiple administration officials, including before the Senate Intelligence Committee, that the information in the Signal chain about the Houthi strike is not classified, and that it does not contain ‘war plans,’ *The Atlantic* is considering publishing the entirety of the Signal chain.”

We sent our first request for comment and feedback to national-security officials shortly after noon, and followed up in the evening after most failed to answer.

Late yesterday, White House Press Secretary Karoline Leavitt emailed a response: “As we have repeatedly stated, there was no classified information transmitted in the group chat. However, as

the CIA Director and National Security Advisor have both expressed today, that does not mean we encourage the release of the conversation. This was intended to be an *[sic]* internal and private deliberation amongst high-level senior staff and sensitive information was discussed. So for those reason *[sic]* — yes, we object to the release.” (The Leavitt statement did not address which elements of the texts the White House considered sensitive, or how, more than a week after the initial air strikes, their publication could have bearing on national security.)

A CIA spokesperson asked us to withhold the name of John Ratcliffe’s chief of staff, which Ratcliffe had shared in the Signal chain, because CIA intelligence officers are traditionally not publicly identified. Ratcliffe had testified earlier yesterday that the officer is not undercover and said it was “completely appropriate” to share their name in the Signal conversation. We will continue to withhold the name of the officer. Otherwise, the messages are unredacted.

Listen: Jeffrey Goldberg on the group chat that broke the internet

As we wrote on Monday, much of the conversation in the “Houthi PC small group” concerned the timing and rationale of attacks on the Houthis, and contained remarks by Trump-administration officials about the alleged shortcomings of America’s European allies. But on the day of the attack—Saturday, March 15—the discussion veered toward the operational.

At 11:44 a.m. eastern time, Hegseth posted in the chat, in all caps, “TEAM UPDATE:”

The text beneath this began, “TIME NOW (1144et): Weather is FAVORABLE. Just CONFIRMED w/CENTCOM we are a GO for mission launch.” Centcom, or Central Command, is the military’s combatant command for the Middle East. The Hegseth text continues:

- “1215et: F-18s LAUNCH (1st strike package)”
- “1345: ‘Trigger Based’ F-18 1st Strike Window Starts (Target Terrorist is @ his Known Location so SHOULD BE ON TIME – also, Strike Drones Launch (MQ-9s)”

Let us pause here for a moment to underscore a point. This Signal message shows that the U.S. secretary of defense texted a group that included a phone number unknown to him—Goldberg’s cellphone—at 11:44 a.m. This was 31 minutes before the first U.S. warplanes launched, and two hours and one minute before the beginning of a period in which a primary target, the Houthi “Target Terrorist,” was expected to be killed by these American aircraft. If this text had been received by someone hostile to American interests—or someone merely indiscreet, and with access to social media—the Houthis would have had time to prepare for what was meant to be a surprise attack on their strongholds. The consequences for American pilots could have been catastrophic.

The Hegseth text then continued:

- “1410: More F-18s LAUNCH (2nd strike package)”
- “1415: Strike Drones on Target (THIS IS WHEN THE FIRST BOMBS WILL DEFINITELY DROP, pending earlier ‘Trigger Based’ targets)”
- “1536 F-18 2nd Strike Starts – also, first sea-based Tomahawks launched.”
- “MORE TO FOLLOW (per timeline)”

- “We are currently clean on OPSEC”—that is, operational security.
- “Godspeed to our Warriors.”

Shortly after, Vice President J. D. Vance texted the group, “I will say a prayer for victory.”

Recommended Reading

At 1:48 p.m., Waltz sent the following text, containing real-time intelligence about conditions at an attack site, apparently in Sanaa: “VP. Building collapsed. Had multiple positive ID. Pete, Kurilla, the IC, amazing job.” Waltz was referring here to Hegseth; General Michael E. Kurilla, the commander of Central Command; and the intelligence community, or IC. The reference to “multiple positive ID” suggests that U.S. intelligence had ascertained the identities of the Houthi target, or targets, using either human or technical assets.

Six minutes later, the vice president, apparently confused by Waltz’s message, wrote, “What?”

At 2 p.m., Waltz responded: “Typing too fast. The first target – their top missile guy – we had positive ID of him walking into his girlfriend’s building and it’s now collapsed.”

Vance responded a minute later: “Excellent.” Thirty-five minutes after that, Ratcliffe, the CIA director, wrote, “A good start,” which Waltz followed with a text containing a fist emoji, an American-flag emoji, and a fire emoji. The Houthi-run Yemeni health ministry reported that at least 53 people were killed in the strikes, a number that has not been independently verified.

Later that afternoon, Hegseth posted: “CENTCOM was/is on point.” Notably, he then told the group that attacks would be continuing. “Great job all. More strikes ongoing for hours tonight, and will provide full initial report tomorrow. But on time, on target, and good readouts so far.”

It is still unclear why a journalist was added to the text exchange. Waltz, who invited Goldberg into the Signal chat, said yesterday that he was investigating “how the heck he got into this room.”
